

Freedom Data Introduces Condensed Version of its Industry-Leading POS System

Designed for Smaller Pharmacies Who Need an Affordable Solution PRO/POS LITE Equips Them to Accept Flexible Benefit Cards

Granbury, Texas—Freedom Data announces the release of PRO/POS LITE—a point-of-sale system designed specifically for smaller pharmacy operations. PRO/POS LITE is a condensed version of the industry-leading Freedom Data PRO/POS POS System that includes just the functionality these pharmacies need at a fraction of the cost of a more expansive system.

Accepting flex benefit cards is a significant competitive advantage for today's pharmacies. PRO/POS LITE enables any pharmacy to process flex cards, track PSE products and deliveries, capture signatures electronically, and receive updates to comply with new government regulations—without having to implement an extensive POS system.

The PRO/POS LITE system can be installed out-of-the-box and is expandable to the full-blown PRO/POS System for a minimum license fee and no additional equipment or equipment costs.

About Freedom Data Systems

From its inception in 1978, Freedom Data's vision was to pioneer system development to be at the forefront of the retail pharmacy industry. To this day, Freedom Data Systems continues to build an integrated approach to retail pharmacy automation. Through innovative system development and a commitment to building strategic business partnerships, we provide value-added benefits to our customers that set us apart in the industry.
